## I am Bronwyn

I live in Perth, Western Australia with my husband, two rescue greyhounds & one rescue cat. Outside of the workplace, I enjoy woodworking, sewing my own clothes, and trying to live a more sustainable life.

# I am a test analyst

Since September 2019, I've been working at Adapptor as a test analyst. I'm responsible for manual testing of our mobile application products along with creating and maintaining test suites. I enjoy working closely with the developer and product team to understand both the underlying code and user story.

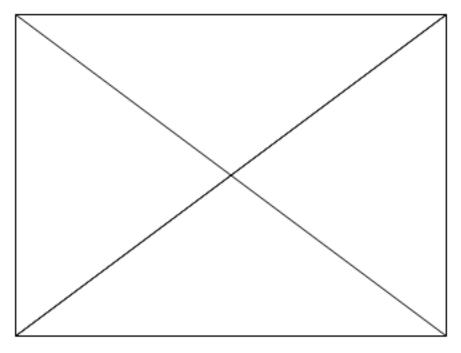

## I am a scientist

Before taking the jump into Tech, I was a molecular microbiologist. This is still a keen interest of mine and I have aspirations to combine my science and tech backgrounds.

# I am an aspiring developer

Beginning with teaching myself R, I quickly fell in love with software development. I am lucky to have gained a place in the She Codes Plus program in 2020 which will help me grow my skills even further, and explore the vast world of programming.
